FUTURE TECHNOLOGIES

VMS
Video Management Software

The full-featured, IP Video Management Software is easily expandable, powerful and simple to use. As an open platform it facilitates custom solutions to be integrated for video analytics, access control, facial recognition and other intelligent applications.
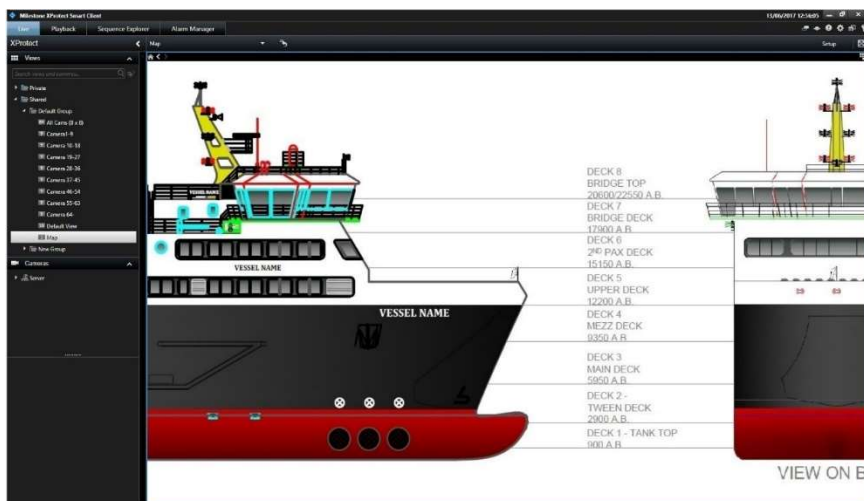

VMS Smart Client is installed on each Operator Station PC. Smart Client is a powerful, easy-to-use viewing application for a surveillance system's daily operations. It gives seamless access to both live & recorded video and instant control of cameras. Advanced functions to detect and respond to incidents combine with a suite of tools for finding and exporting evidence material. Imenco will configure this software prior to system FAT. VMS Management Application resides on the main recording sever and is the central hub of the Imenco CCTV system. The software runs autonomously and is only accessed by the system administrator to configure the cameras and video storage properties. Imenco will configure this software prior to system FAT.

VMS Smart Client

- Instant access to live and recorded video
- Customisable camera views
- Interactive Smart Ship Map Function
- Overlay Buttons
- Virtual Joystick Control
- Advanced Multi-Screen Handling

VMS Management Application

- Centralised camera & recording configuration / management
- Add/Remove hardware
- Configure user access rights
- Automatic recording of camera video
- Provides live / recorded camera streams

VMS Options - VMS Mobile Client

- View surveillance system from almost anywhere on a smartphone or tablet with VMS Mobile Client
- Mobile App that works seamlessly with the VMS
- Streaming Server included

VMS Options – VMS Web Client

- View, playback and share video using any web browser on a PC with VMS Web Client
- Provides instant access to the most commonly used surveillance functions without the need to install the dedicated VMS Smart Client viewer software
- Streaming Server included
- Ship to Shore video streaming over ultra-low bandwidth options
