FUTURE TECHNOLOGIES

Video Transmission Software

Ship to Shore Streaming

Streaming of Live Ultra-Low Bandwidth Situational Awareness Video from 1kbps.

Remote Asset

The encoder can be installed on any remote asset running Linux or Windows.

The installed software performs local recording, encoding and transmission management.

The encoder requires no specialist hardware on remote assets.

Hardware, can be provided if required.

Bi-directional control enabling PTZ, zoom, replay and download of footage and event alerts including Total Recall.

Including adaptive intelligent bitrate management.

Over any network including satellite, mesh and radio, from as little as **1kbps**.

On Premise Server

VSG server software allowing access to multiple client/viewers and remote viewing via the Videosoft client/viewer

Third party VMS integration option

Videosoft supplies the required server software.

Dramatically lowers data costs by streaming from as low as 4kbps.

Tested in diverse environments. Our technology delivers robust, secure, and uninterrupted video streaming.

Multiple streams/areas of interest can be monitored remotely, providing a real-time view of operations.

Total recall feature - specify and download high-resolution pixels from an area of interest in a scene.

Our code base is portable and easy to install across multiple processor platforms.

Simple to use software, and interface with no specialist training required.

Integrates seamlessly with Imenco cameras and systems.

Scalable and flexible, adaptable to the needs of remote business operations.
